# Hot Metal Grille

## **Owner**

Gary Reinert

## **Architect**

The Design Alliance Architects

## **Details**

A \$1 million, 6,000 square foot new restaurant in South Side Works.

Early in the design process, A. Martini & Co. was an integral team member. Because of this involvement, they were able to successfully complete the build-out within a limited budget. This was a considerable effort since many features of the space were custom-made, including the booths, lighting, ceiling and bar.

*Dan Delisio,  
The Design Alliance Architects*

The 6,000 square foot new construction build-out for Hot Metal Grille's restaurant included a bar, restaurant seating area, and kitchen. A. Martini & Co. utilized exposed ductwork and industry stained concrete to enhance the visual appeal of the space. They also met the challenge of building the required exhaust systems without hindering the design of the South Side Works building in which the restaurant resides.

It was wonderful to work with A. Martini & Co. From the beginning, they were dedicated to working with us to make sure the design we wanted was built within budget. Since A. Martini & Co. was working with us, we knew that the project would be completed to our total satisfaction.
