Owner

Catholic Diocese of Greensburg

Architect of Record

Ross Bianco Architects

Design Consultant

Prisco Serena Sturm Architects

Details

A \$2.6 million, 13,000 square foot new facility including and parking lot renovations for Our Lady of Grace Church, Greensburg.

The design of this project was a challenge to build. The angles of the walls and roof constantly needed to be verified from the axis, which was the altar. This verification between the different subcontractors required an extensive amount of coordination by A. Martini & Co. Throughout this project, innovative construction techniques were used to construct this “moving” building. For example, the two stained glass windows at each end of the church were built into a curved wall. Because of the complicated design of the roof, it was fabricated on site to reduce the number of seams.

“This wasn’t an easy job. There were no straight walls. There are curved windows and clear story monitors in the curved walls. The roof isn’t flat.

A. Martini met this challenge and brought this concept to life.”
